

SMART INDIA HACKATHON 2026

TITLE PAGE

- **Problem Statement ID-** Any
- **Problem Statement Title-** Preserving India's Hidden Heritage Through Digital Discovery
- **Theme-** Heritage & Culture
- **PS Category-** Software
- **Team ID-** Any
- **Team Name-** Mostly GPT

Proposed Solution

- A single platform to discover *hidden heritage sites, local artisans, traditional crafts, and cultural experiences*.
- Helps travelers find places and experiences *beyond mainstream tourist destinations*.
- Provides information in a simple, visual and easy-to-explore format.

How It Works

- **Discover Hidden Places** — Explore lesser-known heritage sites with stories, history, location and cultural significance.
- **Interactive Map** — Find heritage places visually and plan visits based on location.
- **Video + Place Details** — Understand a destination through short videos, images and descriptions.
- **Meet Local Artisans** — Discover artisans, their crafts, locations and stories.
- **Accessibility Information** — Shows whether a place is suitable for senior citizens and wheelchair users.
- **AI Guide** — Recommends places based on the user's interests and explains why each place is recommended.

Innovation / Uniqueness

- Goes beyond simply listing tourist destinations by focusing on lesser-known cultural places.
- Combines heritage discovery + artisans + accessibility + personalized AI recommendations.
- Recommendations are not just shown—they also explain why the place suits the traveler.
- Helps travelers make more informed choices before visiting a heritage site.

How It Addresses the Problem

- Gives *hidden heritage sites greater visibility*.
- Helps *local artisans reach potential visitors and customers*.
- Makes it easier for travelers to discover *authentic local culture*.
- Brings heritage, artisans and cultural experiences together in *one platform*.

TECHNICAL APPROACH

Current Prototype

- React
- Vite
- React Router
- CSS
- Local datasets

AI Guide:

- **Current:** Rule-based/mock AI
- **Next:** Real AI API → BharatVerse dataset/RAG → personalized recommendations

Implementation Flow

Planned Production Architecture

- Node.js
- Express.js
- MongoDB Atlas
- Python ML services
- Leaflet/OpenStreetMap
- AI/RAG

Technical Feasibility

- Web platform can integrate *maps, search, videos* and *user profiles*.
- Heritage and artisan information can be stored and updated in a *central database*.
- AI can use *user interests and preferences* to suggest relevant places.
- Features can be developed *step-by-step*, starting with selected regions.

Mitigation Strategies

- Use *verified sources and local inputs* for place and artisan information.
- Provide a system to *update and review listings* regularly.
- Allow artisans to *submit or update their profiles*.
- Clearly mark accessibility information as *available/verified/unknown* rather than assuming.
- Improve recommendations using *user preferences, interactions and feedback*.

Key Challenges & Risks

- *Accuracy of heritage and artisan information*
- Keeping information *updated over time*
- Limited digital presence of *local artisans*
- Incomplete information about *accessibility at heritage sites*
- AI recommendations may be *less relevant with limited user data*

IMPACT AND BENEFITS

Tourists

Personalized discovery → better-fit destinations

Artisans

Digital profile + location discovery → visitor leads

Heritage

Digital documentation + discovery → increased awareness

Communities

Local experiences + artisan visibility → distributed tourism activity

Accessibility

Accessibility information + suitability filters → more inclusive heritage visits

Cultural Stories

Local stories + contextual heritage information → deeper cultural understanding

Personalized Planning

User interests + location preferences → more relevant travel choices

Success Metrics

- Heritage locations discovered
- Artisan profiles onboarded
- Recommendation relevance
- User engagement
- Verified accessibility coverage

RESEARCH AND REFERENCES

Original Concept

BharatVerse is an original concept developed by the team to promote discovery of India's hidden heritage, local artisans, forgotten stories and underrated destinations.

Current Data Approach

The current prototype uses internally curated and structured destination information created by the team for demonstration. No external dataset has been integrated yet.
